

PRO 57 SERIES

Quiet and Compact –
With Protection Against
Dust and Moisture

Cashiers can quickly insert banknotes according to the provided guides, which are adjustable for currencies of differing sizes.

The riffling mechanism is mounted on a unique metal frame to guarantee quality construction and a longer life for the device.

A suspicious banknote is always placed on the top of a stack and is never included in the final calculation. It helps prevent the need for a second counting and economizes the user's time and the machine's resources.

The control panel allows the user to program specific quantities of banknotes to be scanned, with audio alerts for any errors.

The external display allows for organization of working space to be convenient for the cashier and for customers. This allows for the results of scanning banknotes to be easily displayed to customers.

PRO 57 SERIES

Office Banknote Counters
